EDUCATION:

University of Saskatchewan | Saskatoon, Saskatchewan

B.S. in Computer Science & B.A. in Economics

Expected May 2027

EXPERIENCE

Data Analyst Intern | University of Saskatchewan | Saskatoon, Saskatchewan

May 2026 – Aug 2026

- Developed AI-assisted document understanding workflows to automate herbarium specimen digitization using Python-based data pipelines
- Built ETL workflows to transform unstructured image and text data into structured database-ready records containing taxonomy, locality, collector information, and specimen metadata
- Designed validation and review workflows to improve data quality, consistency, and reliability at scale
- Created dashboards and visualizations in Tableau and Power BI to monitor extraction performance and support data-driven decision-making

Economic Intelligence Project Intern | Western Economic Forum | Saskatoon, Saskatchewan

Project-Based | May 2026 – Present

- Collaborating directly with the founder and leadership team to design and develop an economic intelligence platform focused on Western Canadian industries
- Building API-driven data pipelines that aggregate, clean, and process economic indicators, stock activity, commodity prices, and company data
- Designing AI-assisted insight generation workflows that transform market data into plain-language summaries using large language model APIs
- Developing dashboard features and analytical tools to visualize sector trends and economic activity

Web Development Intern | Raymore Trailers | Remote

Sep 2025 – Dec 2025

- Redesigned the company inventory system with responsive layouts, filtering functionality, and pricing features
 - Diagnosed and restored API integrations between QuickBooks, Heroku, and Mailchimp to improve system reliability and automation
-

PROJECTS

CrewShift | Django, Django REST Framework, PostgreSQL, JavaScript

- Developed a full-stack workforce management platform to streamline scheduling and communication for small retail teams based on operational challenges identified at Soccer Locker
- Built employee and manager workflows supporting shift scheduling, shift exchanges, availability management, and time-off requests
- Designed relational PostgreSQL schemas and SQL-based data structures for workforce and scheduling management
- Implemented automated notifications and role-based authentication to improve communication and workflow efficiency

Financial Statement Analyzer | Python, Pandas, Matplotlib, OpenPyXL

- Built a financial analytics tool that computed 12+ financial performance metrics including ROA, ROE, margins, and debt ratios
- Automated Excel report generation and visual trend analysis for company performance evaluation

Google Calendar to Excel Pipeline | Python, Google API, OpenPyXL

- Built an automated ETL pipeline to extract, clean, and synchronize calendar data into structured Excel datasets
